## EDUCATION

### Advanced Educational Program of Information System

Student at University of Information Technology | 2014 - Present

## EXPERIENCES

### Speech to text Application

Programming Language: Android

|  
Tool: Android Studio

| 10/2016 - Present

Description: This program allows user to use his voice to activate an application installed in his mobile device. The program uses Cloud Speech API published by Google to transform speech to text. Then, the application in the device having the most similar name to the generated text will be run.

### Shoe Store Webpage

Programming Language: HTML5, CSS3, PHP

|  
Tools: Chrome, Sublime text, XAMPP, SQL express

| 10/2016 - Present

Description: This webpage is used for selling shoe. With the use-case diagram, Activity diagram, class diagram and database design, basic functions of a normal selling webpage is developed, which allow its owner to manage the sales and customer to search or select or order.

### Tetris

Programming Language: Python

|  
Tool: Pycharm

| 10/2016 - Present

Description: This program is a game that allows player to control a falling brick to an appropriate position. The game is also added with new modes such as time limited, brick changing instead of rotating.
