INTERESTS

Technology

Movie

Music

Doing exercise

ADDITIONAL INFORMATION

I find that i like coding. However, my coding skill for requirment is still basic level. the reason is my school only specialize in IT service field, so i do not have enough time to improve my coding skill. i used to team up with many

people for each project in university, i think i prefer tester role than others and can get on well with other teammates. Beside, i can help my teammates in coding learning their coding style and improve my coding skill through testing. i apply for the tester for the project to improved and challenged myself. If i am accepted for that role, i will try my best to learn from other people and complete the tasks.
